*Are you getting the most  
from your hearing aids?  
Enjoy the sounds of life.*

The Sound-n-Dry® storage unit can be used to remove moisture from hearing aids. Moisture builds up as a result of normal wearing conditions and can reduce performance of the hearing aids and battery life. Sound-n-dry® includes a desiccant sachet that draws out the moisture. This unit is suitable for both “in-the-ear” and ‘behind-the-ear” hearing aids, also cochlear implant speech processors. It stores them safely when they are not being worn, such as overnight.
